

RAIN BIRD

SEE US ABOUT OUR SPRINKLER & IRRIGATION SYSTEMS FOR YOUR LAWN

Our systems are very convenient, low maintenance and cost effective. Here are a few of the features we include:

- **SHAWANO LAWN AND STONE INSTALLS ALL OF OUR SPRINKLER SYSTEMS TO SELF DRAIN** – this means there is no ‘end of season’ blowouts. With the state of the art fittings we install – your sprinkler heads, piping, and entire system will automatically drain.
- **OUR INSTALLS ARE LOW IMPACT**. This means our work on your lawn and planting beds are minimally invasive. We use a technique called vibration to install the poly – piping underground, as opposed to trenching around your lawn. Within days our work will be hardly noticeable.
- **WE USE THE RAINBIRD SPRINKLER SYSTEM**. The Rainbird sprinkler heads are designed to deliver a very consistent amount of water for every square foot of area it covers. Rainbird provides us with many different types of sprinkler heads depending on the application. We will prescribe the sprinkler head appropriate for each area. On any given lawn we find we may be using sprinkler head for a very confined area or a very large area. The head we prescribe will match the area being covered for maximum efficiency. This is determined by the area being cover, its shape, the maximum distance, shade, sunlight, ect. What this means to you is our design will cause you to neither overwatered, nor under watered.
- **OUR INSTALLS CAN INCLUDE A TIMER**. Most customers select this inexpensive option. This feature is extremely user friendly, and we show you how to use it. The timer schedules your sprinkler system to be on when you want it on and off when you want it off. The times are your choice. Any hour of the day, for any duration of time. We will advise you what we project for your lawn need.
- Depending on the size of your lawn and whether you are drawing from city water or a private well, we may recommend several zones for your system. Zones mean we separate different areas of your lawn, such as front and back and so forth. We can do many zones. When integrated with the timer, we can schedule different zones to come on and off in sequence depending on the shade and sunlight in each zone.
- **YOUR RAINBIRD SPRINKLER HEADS WILL BE INSTALLED TO BE BENEATH YOUR LAWN MOWERS BLADE**. This means you can mow your lawn confidently without worrying about hitting the head. The head will pop up once the system sends water to the head.
- **WE ALSO OFFER A DRIP LINE SYSTEM FOR PLANTING BEDS**. This is a water line installed within your planting beds, run on a timer, to deliver a very slow ‘drip’ of water to your planting beds. This allows you to have only your plants receive water and not your entire planting bed.
- **FINAL ADJUSTMENT**. Once your system is installed, we will adjust each head to ensure they are watering what needs to be watered and not watering things that do not need water such as driveways, streets, sidewalks, patios, decks, your home, ect.
- **WE GUARANTEE OUR WORK**, we will provide Maintenance Information for you, we will take care of any adjustments that need to happen as well as show you how to make minor adjustments yourself.
- We will install a pump when drawing from a lake, river or pond.
- We also do many types of retrofitting to older existing sprinkler systems. We can make your system much more convenient by adding Rainbird pop-up sprinkler heads to existing locations.
- Many times homeowners will add on or change the shape of their planting beds or lawn and find a sprinkler head is in the wrong spot. We can relocate your sprinkler heads and ass sprinkler heads to existing systems for efficient coverage.
- Many older sprinkler companies require the system to be blown out in the fall. We offer this service as well for you and will come out and winterize your system for you if it doesn't have automatic drains.
